When you print a job that has a height greater than its width, that is a **PORTRAIT** print. The max width of our plotter is 36”, so if your large dimension is over 36” you should plot in portrait orientation.

When you print a job that has a width greater than its height, that is a **LANDSCAPE** print. If the largest dimension in your print is 36” you should plot in landscape orientation.

The “Auto-Rotate and Center” option in the program dialog box is deceptive. It will rotate your document and place it correctly in the PREVIEW, but NOT in the PLOTTER.
